

## From the Corner Office

*"An investment in knowledge pays the best interest."*

Ben Franklin

What was true in the early days of our country is still true today: Education is the key to success in life. For most American children, the school is the focal point of their education from kindergarten through high school. It's the building many kids call "home" for six or more hours a day...it's where they learn, where they socialize and where they develop skills that will last a lifetime.

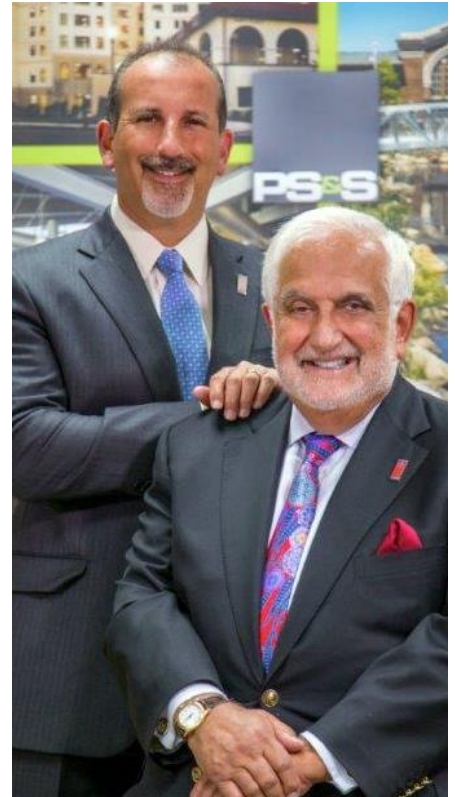

While the importance of education remains constant, what is different now from yesteryear is how and where children learn. It's obvious that the one-room schoolhouse has gone the way of the horse and buggy, replaced by modern technological structures built to educate children in the 21st century and beyond.

PS&S designs sustainable, efficient, and cost effective educational facilities for both private and public institutions. Our goal is to translate the needs and vision of our clients into practical architecture and engineering solutions that support current and future educational needs.

We are proud of our portfolio of completed K-12 education projects which include recent additions in New Brunswick, Keansburg, Newark, Paterson and Millville, New Jersey as well as the Bronx, New York.

Townships and school districts are making important investments in their educational infrastructure and our architects and engineers have extensive experience designing and delivering high-performance design-build "21st century" K-12 school buildings. We are also LEED-certified specialists.

With the 2017-2018 school year now in full swing, our autumn newsletter will highlight our education work and the professionals who are working to design and build the next generation of schools for the next generation of students.
